# UNEQUALLED CUTTING ABILITY!

While CRESCENT SNIPS are conventional in design, it is their hidden features that make them outstanding. First, we use special grades of steel, made to specifications. Crescent's own method of electronic hardening insures hard cutting edges, backed by the necessary interior toughness. The shape of the blades has been scientifically planned and then uniformity is insured by grinding on specially designed grinding machines. The total result of all these features — snips that do the work they are meant to do with more ease, and do it longer than any other snips on the market today.

# A SNIP for Every Purpose in these CRESCENT Lines

## STANDARD

|          |            |
|----------|------------|
| S47 — 7" | 1 3/4" cut |
| S48 — 8" | 1 7/8" cut |
| S49 — 9" | 2" cut     |
| S410—10" | 2 1/4" cut |
| S411—11" | 2 1/2" cut |
| S412—12" | 3" cut     |
| S413—13" | 3 1/2" cut |
| S414—14" | 4" cut     |

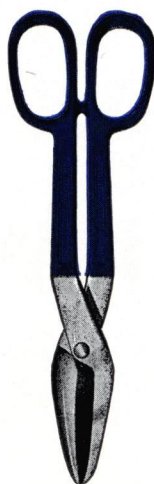

## CIRCULAR

|            |            |
|------------|------------|
| T47- 7" —  | 1 3/4" cut |
| T412-12" — | 3" cut     |

All of these snips have polished blades and blue enameled handles and the name "Crescent Tool Co." is forged in the panel on each handle. Look for the Crescent name when you purchase Snips.

The Crescent line of forged steel snips have proven their worth over a period of many years. Their superior cutting ability stems from many factors, and starts right with the design and shape of these fine tools. Next is the special grade of steel from which they are forged. Then comes the accuracy of machining which makes them work smoothly and fit the hand comfortably. Electronic hardening enables them to take and hold an exceptionally keen cutting edge, which is obtained through the use of specially designed grinding equipment.

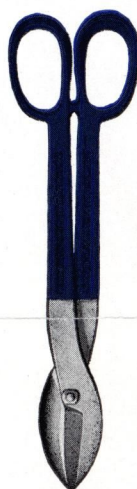

## COMBINATION

U412-12" — 3" cut

## (BELOW) HEAVY DUTY "BULL DOG"

U416-16" — 2 1/2" cut

## COMPOUND LEVERAGE AVIATION SNIPS

V19L

THREE  
STYLES

V19S

V19L—CUTS RIGHT  
V19S—CUTS STRAIGHT  
V19R—CUTS LEFT

V19R

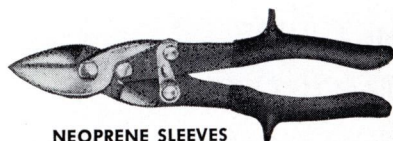

Newer members of the Crescent snip line, but thoroughly tested before being offered for sale. Improved design. Alloy steel blades give the utmost in hardness and toughness. Streamlined shape assures smooth operation. Zinc plated blades resist corrosion. Serrations on blades machine ground and can be renewed at the factory. Rivets instead of bolts keep blades in better alignment and give smoother action. Where bolts are necessary, self locking nuts are used. The latch is mounted flush, does its job without getting in the way.

## NEOPRENE SLEEVES GIVE ADDED EFFICIENCY

Costing very little extra, these moulded Neoprene Sleeves give added comfort to the hand, and the stops on them enable the operator to exert additional pressure toward the direction of cut.

## SPECIFICATIONS

9 3/4" long overall  
1 3/8" cutting edge  
Zinc plated blades  
Parkerized handles
